SUMMARY

Full-stack software engineer with 4 years in financial services building data-heavy analytics platforms with Java/Spring Boot, Angular, and Snowflake. Experienced owning features from API design through production launch, plus deployment and infrastructure work.

EXPERIENCE

BNY August 2022 – Present

Software Engineer

- Built the backend for a human-in-the-loop review workflow for AI-generated Insights on a payments analytics platform including a nine-status state machine, 11 REST endpoints and an append-only audit trail on Snowflake.
- Owned the development of Lockbox Navigator, a client-facing lockbox analytics widget, end-to-end across Angular, Spring Boot APIs, and Snowflake queries with cross-filtering and demo-data mode used by 27 clients.
- Implemented server-side pagination/sorting and lazy loading for detail tables scaling them from a 1K-row ceiling to 100K+ records.
- Resolved an OOM failure in the Pivot data export pipeline on our Imply Druid cluster cutting export times for 5-6 MB files from several hours to under a minute.
- Built a self-service provisioning workflow in the React UI for an internal automation platform with multi-step requests, status tracking, and config-driven validation that blocked invalid server/package selections.

PROJECTS

MTA API — github.com/joshmorr/mta-api

- Built a REST API on Bun that unifies the MTA's static and real-time GTFS feeds into plain JSON, with schema-validated responses and a generated OpenAPI spec.
- Decoded real-time protobuf feeds with per-feed TTL caching and in-flight request deduplication to cut redundant upstream fetches.
- Built a daily GitHub Actions pipeline that compiles ~2.4M rows of static schedule data into a read-only SQLite snapshot published to object storage that instances download on boot, minimizing cold-start latency and instance memory footprint.
- Exposed 9 custom MCP tools to enable LLM agents to query transit data directly by interfacing with the API's service layer.

SKILLS

Languages: Java, TypeScript, SQL
Frameworks & Libraries: Spring Boot, Angular, React, Bun
Database: Snowflake, Imply Druid, SQLite
DevOps & Tooling: Docker, Ansible, GitHub Actions

EDUCATION

SUNY New Paltz — BS, Computer Science August 2019 – May 2021
Suffolk County Community College — AS, Computer Science January 2017 – May 2019
